

Treadwell & Rollo, Inc.

Providing premier environmental, geotechnical, and seismic solutions since 1988.

The year 2008 marks the 20th anniversary of Treadwell & Rollo. The firm continues to focus on its reputation for quality as well as technical and geographic growth with five offices in the Bay Area and in Montana.

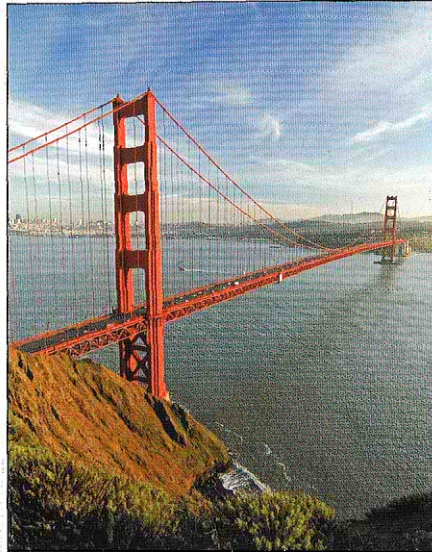

“We look at growth not only for growth’s sake,” says Philip Tringale, president and CEO, “but for the sustainability of the firm.” To that end, Treadwell & Rollo is committed to its employees, continuing to create opportunities and challenges for the staff during periods of growth as well as during periods when the construction industry is slower.

Treadwell & Rollo has a reputation for excellence — it’s an environmental, geotechnical and seismic engineering firm, with a highly-experienced group of professionals throughout the firm. In fact, the firm has received numerous awards and recognition, most notably from City of Hope, the Building Industrial Conference Board, the San Francisco Board of Supervisors highlighting the firm’s work and help in the aftermath of the Loma Prieta earthquake, and from several other municipal and private organizations.

“We constantly integrate our geotechnical and environmental services, which is relatively unique to a firm of our size. This combination of services can often save the client time and money and result in more effective technical solutions,” says Tringale.

Treadwell & Rollo initially focused on providing environmental consulting

services when the firm started in 1988. When Frank L. Rollo joined the firm in 1991, the firm began to offer its premier geotechnical consulting services to clients. “Geotechnical challenges are very real and the solutions are fairly sophisticated in this area,” says Tringale, referencing the soil quality and seismic considerations in the Bay Area as well as chemicals that have leaked into the soil and groundwater over the years

“We’ve provided training for government agencies, expert testimony at depositions and trials, and construction management services,” says Tringale. “Our goal is to ensure the success of our clients on every project”

That high level of expertise means Treadwell & Rollo can boast more senior-level employees than almost any other firm of its size in the Bay Area.

Treadwell & Rollo’s projects are everywhere—AT&T Park, Golden Gate Bridge, One Rincon Hill, numerous Silicon Valley campuses including Oracle and Sun Microsystems, Pixar, the Port of Oakland and many of California’s colleges and universities. It’s a “Who’s Who” of Bay Area projects. Additionally,

Treadwell & Rollo has worked on projects on the East Coast and in the state of Hawaii, the Spanish Peaks exclusive ski and golf resort in Big Sky, Montana, and is preparing to provide services on its first project in China.

“Our reputation for excellence is what we value most,” says Tringale.

Treadwell & Rollo has built its practice on the foundation of hundreds of successful projects. “At the same time, we have to keep our prices competitive,” says Tringale, who points out that there is never a compromise of high-quality work. “We consider ourselves a premier environmental, geotechnical, and seismic consulting and engineering firm, and that takes constant effort.”

The privately-owned Treadwell & Rollo has nearly 100 employees. The staff has been trained in how to incorporate sustainable business practices in their day-to-day efforts, especially since Treadwell & Rollo has become a certified Bay Area Green Business. A reduce, reuse and recycle program has been implemented internally, and sustainable solutions have been integrated into the firm’s engineering and remediation services.
